

Product Specification Sheet

Alcoa Vintage® Vinyl Exterior Shutters 14 5/8 Inch Shutter Transom Top

This guide is intended to help answer any questions about specific dimensions of the outdoor vinyl shutter transom tops you will receive. Please note that the outdoor vinyl shutter transom top manufacturing process is not exact. All sizes are nominal and may vary slightly from one shutter color to the next.

Height: 13"

Width: 14 5/8"

Depth (Thickness): 1"

Note: This transom top fits all Alcoa Vintage® standard and custom exterior vinyl shutters.

The raised panel shutter transom top is a decorative exterior accent for Alcoa exterior vinyl shutters. Adding it to the top of Alcoa exterior vinyl shutters effectively makes raised panel shutters with 2 mid rail sections.

The window measurement should be taken from the top of the window to the bottom of the window including the window trim, but excluding any window sill. The height of the exterior vinyl shutters you order for these transom tops should be 13 inches less than the window measurement.
