

Product Specification Sheet

Mid-America Vinyl Window Shutters 14 3/4 Inch Transom Top

This guide is intended to help answer any questions about specific dimensions of the vinyl shutter transom tops you will receive. Please note that the vinyl shutter transom top manufacturing process is not exact. All sizes are nominal and may vary slightly from one shutter color to the next.

Height: 11 3/4"

Width: 14 3/4"

Depth (Thickness): 7/8"

Note: This transom top fits Mid-America raised panel standard shutters when ordered in 14 3/4" widths (style MP). Note that this transom top does not fit properly on custom shutters or standard louver shutters.

The raised panel shutter transom top is a decorative exterior accent for Mid-America raised panel standard exterior vinyl shutters. Adding it to the top of Mid-America exterior vinyl shutters makes them fit better with transom windows. Using this transom top is also a way to add another mid rail into the shutter as a cheaper alternative to custom shutters.

The window measurement for rectangular windows should be taken from the top of the window to the bottom of the window including the window trim. Subtracting 11 3/4" from this measurement will give you the size of shutter you need to order for your window.
